Telegram AI Assistant with Automation using n8n

Overview:

This project aims to build an advanced Telegram AI assistant using n8n that can perform multiple automation tasks such as sending emails and creating Google sheets. The assistant processes user input and executes actions using integrated tools.

Tools & Technologies:

- n8n(workflow Automation Tool)
- Telegram Bot API
- Open Router AI model
- Gmail API
- Google Sheets API
- Google Drive API
- Simple Memory

Workflow Overview:

This workflow triggers when a message is received via telegram . It routes the message through an if node to determine which AI Agent should handle the request,processes the logic,and sends a response back to the user

Trigger routing

Telegram Trigger: Monitors for incoming messages or documents from Telegram Bot.

IF Node: uses a condition to split the path between AI agent 1 and AI agent 2

AI Agent Configurations:

Both agents use OpenRouter as the model provider and Simple Window Memory to keep track of the conversation.

Agent A: General Assistant (Top Path)

Purpose: Handles general queries and email-related tasks.

Tools Connected:

Gmail (Read): To fetch or list recent emails.

Gmail (Send): To draft or send replies directly.

Logic: This agent is optimized for text-based interaction and communication.

Agent B:File Manager (Bottom Path)

Purpose: Handles Document management

Tools Connected:

Google Drive: Used to upload files received by telegram
Google sheet: Used to Create new google Sheet.

Logic: This agent is optimized for text-based interaction and communication.

Data Processing & Output

After the agents complete their tasks, the workflow merges the data to prepare the final response

Merge Node: Combines the output from either AI agent back into a stream.

Code Node : Ensures the output is formatted correctly.

Filter Node : its a optional node check if the AI output contains valid content before sending

Telegram Send message: sends the final answer to the user by text

The Telegram Send Message node takes the response and sends it back to the user using the chat ID:
`{{$node["Telegram Trigger"].json["message"]["chat"]["id"]}}`

Job Opportunities Across the Globe for Freshers

Inbox ×

akshaigorantla@aftl.co.uk 11:17 AM (1 hour ago)

to me

Hello,

I hope this message finds you well. I wanted to share some information about job opportunities available across the globe for freshers. There are various industries and companies actively looking to hire fresh graduates, including IT, finance, marketing, healthcare, and more.

If you would like, I can provide you with resources, job portals, or specific opportunities tailored to your skills and interests.

Please let me know how I can assist you further.

Best regards,
[Your Name]
